Membership-cosine graph Laplacian spectra: λ_2 gap and the λ_2/n scale (round-0 fit, seed=0)
iris
λ_2=19.217
λ_2/n=0.1281
wine
λ_2=82.775
λ_2/n=0.4650
glass
λ_2=48.625
λ_2/n=0.2272
ecoli
λ_2=1.384
λ_2/n=0.0041
aggregation
λ_2=25.436
λ_2/n=0.0323
compound
λ_2=7.275
λ_2/n=0.0182
$\lambda_i(L_R)$
eigenvalue index
Deterministic; R=cosine(normalized U), L_R=diag(R1)-R; lambda2/n is recomputed each AL round in the experiments.
